

E901

Programmable, wired thermostat

Technical Informations

E901 is a weekly, surface-mounted electronic room thermostat, used for control of heating devices (e.g. gas, oil boilers, heat pumps) or cooling devices. It has the function of creating your own schedules. Thanks to the built-in algorithms, it offers much better temperature control accuracy than traditional mechanical thermostats. The thermostat should use AA, 1.5V alkaline batteries. Rechargeable batteries are not allowed.

Power supply	2 x AA batteries
Max current	5 (3) A
Output control	Voltage-free NO/COM relay
Temp. setpoint range	5°C – 35°C
Display temp. accuracy	0.1°C or 0.5°C
Control algorithm	TPI or Hysteresis (±0.25°C lub ±0.5°C)
Communication	Wired
Dimension [mm]	150 x 84 x 22

Connection description:
