E901RF is a weekly, surface-mounted electronic room thermostat, used for control of heating devices (e.g. gas, oil boilers, heat pumps) or cooling devices. It has the function of creating your own schedules. Thanks to the built-in algorithms, it offers much better temperature control accuracy than traditional mechanical thermostats. The thermostat should use AA, 1.5V alkaline batteries. Rechargeable batteries are not allowed.

In the set:

- thermostat transmitter (E901TX)
- receiver (E901RX)
